

## About us

Greenchild L.L.C. contributes significantly to climate protection and the preservation of nature. Our goal is to show that financial security and active conservation are in perfect harmony.

## MAKE A CHANGE

Earth is what we all  
have in common

We have planted around **200 hectares** of land in Lloshkobare so far. **Greenchild** has the largest plantation in Europe in one piece. And the rest of the plantation is planned for spring 2023.

This expansion has brought great benefits to the company in terms of **capacity growth** as well as **diversification of services**.

We have acquired another **93 hectares** in **Kumanovë**.

**North Macedonia**

Greenchild Kosovo now has more than **150 hectares** of land, and we are planting seedlings developed by us and grown by our laboratory from **2021 onwards**.

After years of research and careful planning, we decided to buy and plant another **20 hectares**.

**2022**

**Herbit 2022**

**2021-2022**

**2020**

**2019**

**2017**

We have also expanded our team and invested in cutting-edge machinery for soil preparation and established irrigation systems. Greenchild currently employs **11 regular employees** and **10 seasonal employees**.

We founded **Greenchild** to improve the climate. With the valuable support of two new business partners, **Jeton Shala** and **Josef Fürnkäs**, further plantations were planned, but this time a total of **75 hectares** were to be planted.

With the experts in this field by our side, in **2017**, we decided to plant **475 Kiri** trees in Isniq, Kosovo, on approximately **0.75 hectares**.

**In 2014, we were first introduced to the potential of the Kiri tree.**

## News

Greenchild L.L.C has efficient irrigation systems. Although the Kiri tree is generally environmentally friendly, responsible use of the water resource for irrigation is an important element of our management system. Greenchild LCC recently located large amounts of shallow water beneath the Lloshkobare Plantation. After setting up five wells, water was identified at a rate of 17 l/s. This maneuver represents an important achievement for Greenchild LLC. Now we are in negotiations with the mayor to expand further solar power plants in Kosovo.

# Our Future

In the foreseeable future, we aim to quickly establish ourselves as the leader in planting Kiri trees and supplying the highest quality wood. We intend to build greenhouses to grow new seedlings and purchase new wood processing equipment. This saves us long transportation routes, protects the environment, and assures high-quality wood. The future is agro-photovoltaic with solar power plants and extends beyond the fundamentals of business. Thus, State-of-the-art agricultural techniques are used. We wish to install solar panels to increase the efficiency of land usage. Pollinating insects like honey bees can find great nectar from the Kiri tree. It is expected that one hectare of Kiri tree blooms would provide enough nectar to make 100 jars of honey.

**160.000**

Kiri trees grow on our plantations

**1 Tree**

Grows 5 m in first year

**In 8 years**

We produce 200.000 m<sup>3</sup> of the best production wood

## We thank you!

With your investment, you have supported us in constantly expanding our plantation, protecting the environment in the long term and promoting further nature conservation projects.

We are open to criticism and suggestions and look forward to every recommendation.

We would like to thank you for your trust and support.
